EXPERIMENT 7

Integrating a Zoho Creator Application with Zoho Cliq using Connections and APIs

Name: Thanashree G R

Roll No: 241501262

Aim

To integrate the Patient Appointment Booking System built in Zoho Creator with Zoho Cliq using an authenticated connection and a Deluge workflow, so that a notification is posted to the #patientappointments channel after a successful patient registration submission.

Software / Services Required

Zoho Creator, Zoho Cliq, a configured Zoho Cliq connection, and the Patient Registration form.

Procedure

1. Open the Patient Appointment Booking System application in Zoho Creator.

2. Open Microservices → Connections and create a Zoho Cliq connection using Quick connect (Zoho credential). Authorize the connection and confirm that it is enabled.

3. Enable the connection for the Patient Appointment Booking System application.

4. In Zoho Cliq, open the #patientappointments channel and check its Connectors tab. Note the channel's unique name: patientappointments.

5. Open Patient Registration → Form workflows and create a workflow for the Created record event. Choose Successful form submission as the form event.

6. Add a Deluge Script action using the connection link name zoho_cliq_connection to post a notification to the channel.

7. Save the workflow, submit a valid test registration, and check the #patientappointments channel for the message.

Deluge Script

```
response = zoho.cliq.postToChannel("patientappointments", "New patient appointment request
submitted.", "zoho_cliq_connection");
info response;
```

Note: The channel unique name and connection link name must match the values configured in the account.

Screenshots and Evidence

The following screenshots document the connection setup, channel information, workflow trigger, and observed output.

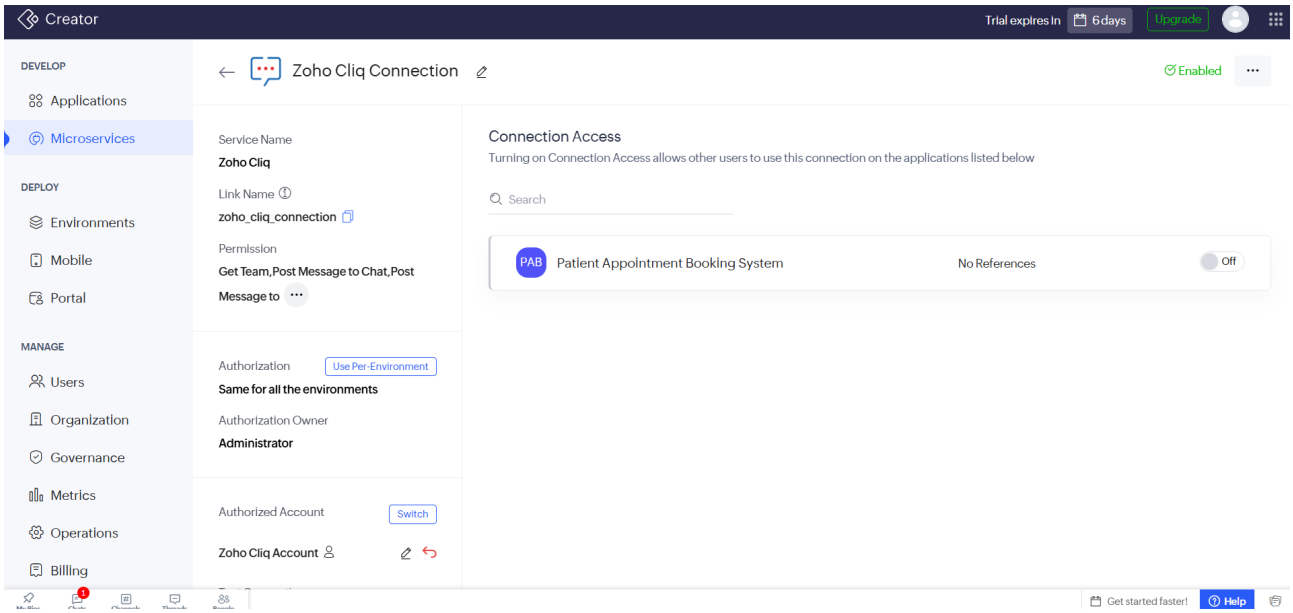

Figure 1. Zoho Cliq connection created and enabled in Zoho Creator.

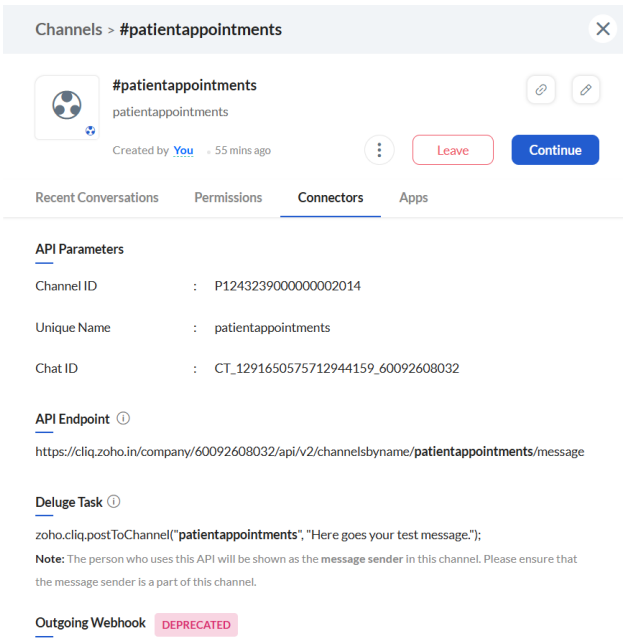

Figure 2. Cliq channel connector details, including unique name and API endpoint.

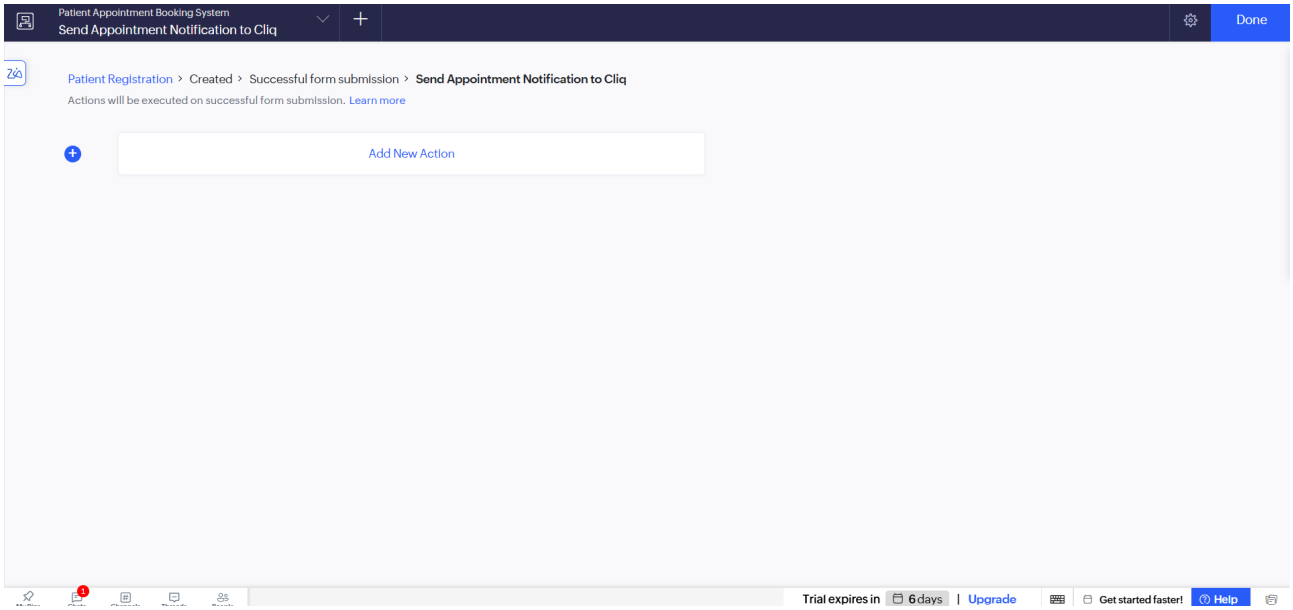

Figure 3. Workflow configured to run after successful form submission.

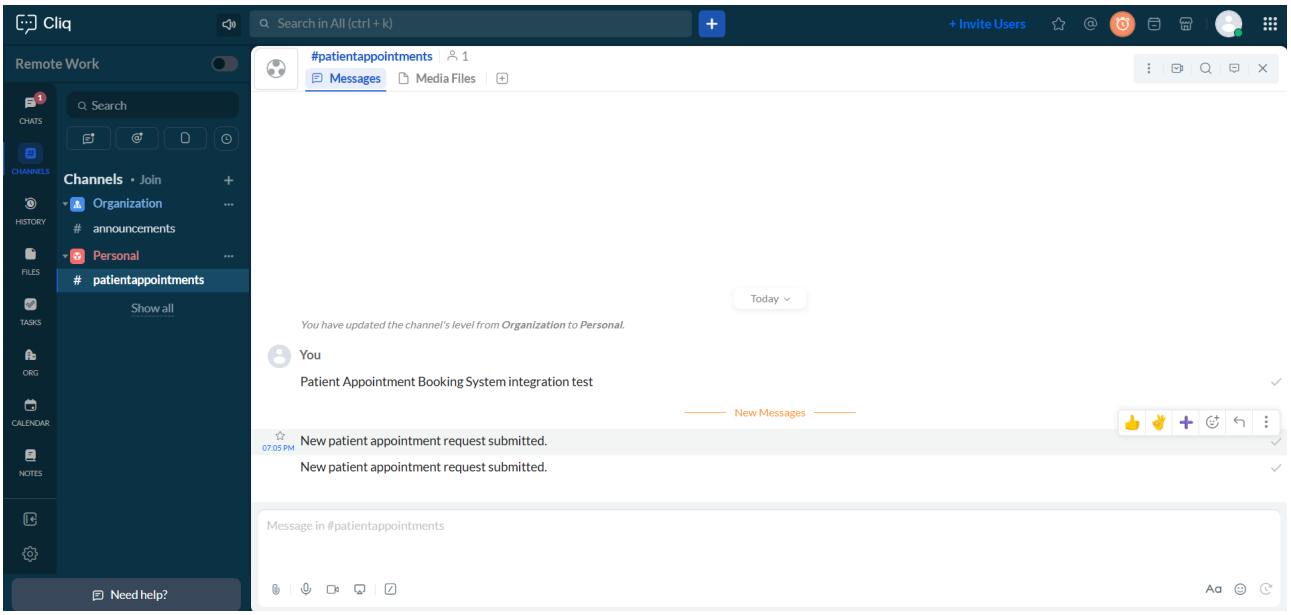

Figure 4. Output verification: notification messages received in #patientappointments.

Result

The Zoho Creator–Zoho Cliq connection was created and enabled, and the Patient Registration workflow was configured to run after successful form submission. The #patientappointments channel displayed the notification “New patient appointment request submitted.”, confirming that the integration test succeeded.
