EXPERIMENT 10

Counting Appointment Records Using a Deluge Function

Name: Thanashree G R

Roll No: 241501262

Aim

To create and execute a Deluge function in Zoho Creator that counts records in the Patient Registration form and displays the total appointment count.

Procedure

1. Open the Patient Appointment Booking System application in Zoho Creator.
2. Navigate to **Workflow** → **Functions** and create a Deluge function named **CountAppointments**.
3. Enter the code to count records from the Patient Registration form and display the count using an information log.
4. Save the function and click **Execute** to test it.
5. Verify the execution status and total count shown in the log messages.

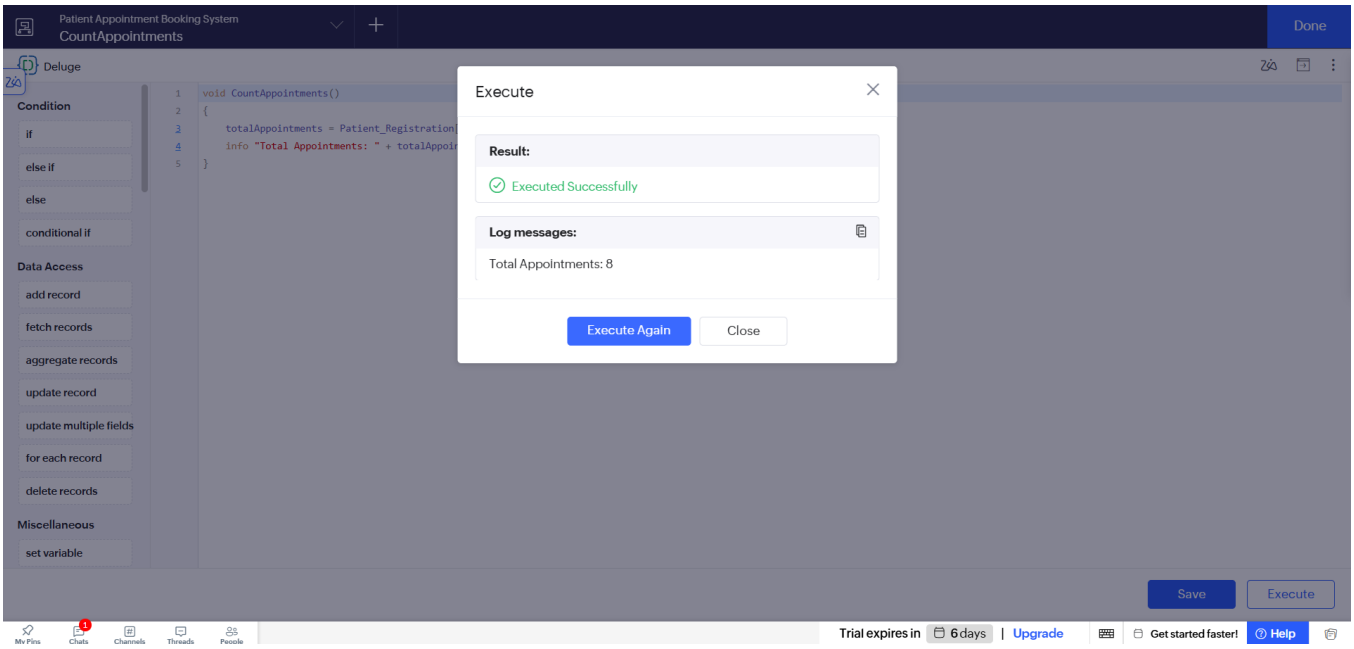

Program

```
void CountAppointments()
{
    totalAppointments = Patient_Registration[ID != 0].count();
    info "Total Appointments: " + totalAppointments;
}
```

Output / Result

The function executed successfully. The execution log displayed **“Total Appointments: 8”**, confirming that eight records were counted.

Execution Screenshot

Application: Patient Appointment Booking System | Platform: Zoho Creator (Deluge)
