EXPERIMENT 6: WORKFLOW AUTOMATION

Patient Appointment Booking System using Zoho Creator

Name: Thanashree G R
Roll Number: 241501262

Aim

To configure and test workflow automation in Zoho Creator using form validation, an appointment approval process, email notifications, and a scheduled appointment reminder.

Software Required

Zoho Creator and a web browser.

Procedure

1. Configure and test validation on the Patient Registration form.
2. Create an approval workflow for new patient registration records and assign an approver.
3. Configure Approve and Reject outcomes with email notifications.
4. Submit a sample record and verify it appears under Pending Tasks.
5. Test the rejection outcome and verify the rejection email.
6. Create or verify the “Appointment Reminder - 1 Day Before” schedule and confirm that it is enabled.

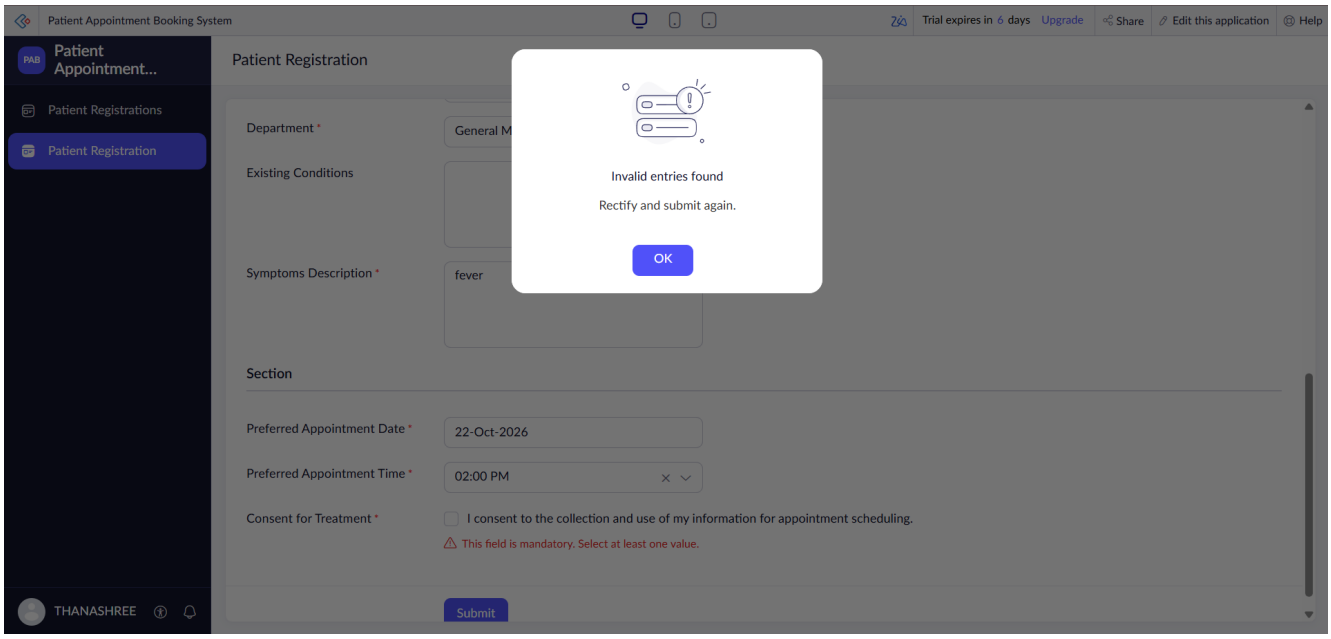

Figure 1. Form validation: submission is blocked when mandatory treatment consent is not selected.

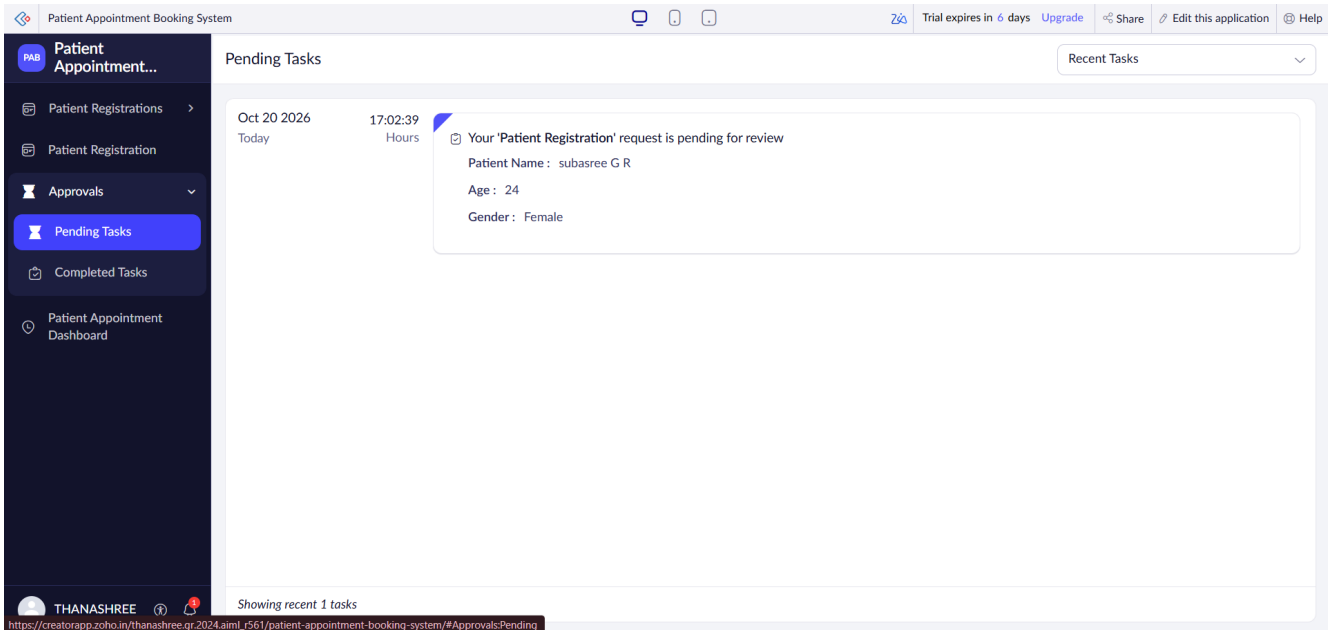

Figure 2. Approval workflow test: a patient registration request is pending review.

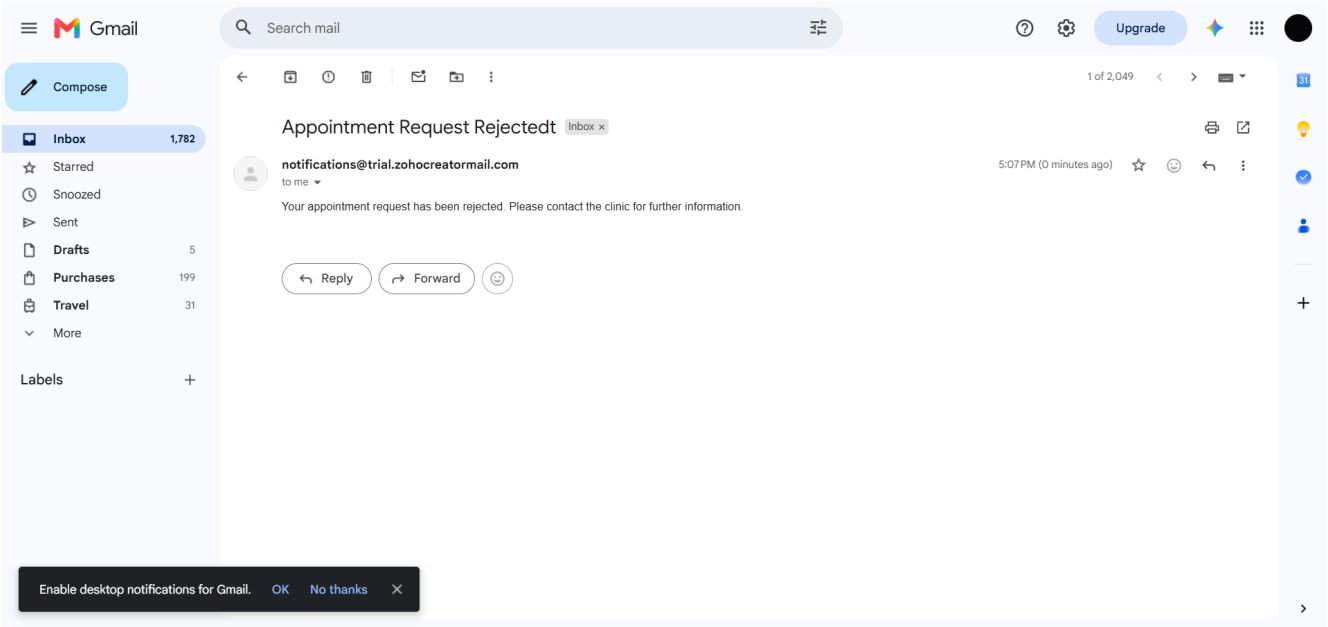

Figure 3. Email notification confirming that the appointment request was rejected.

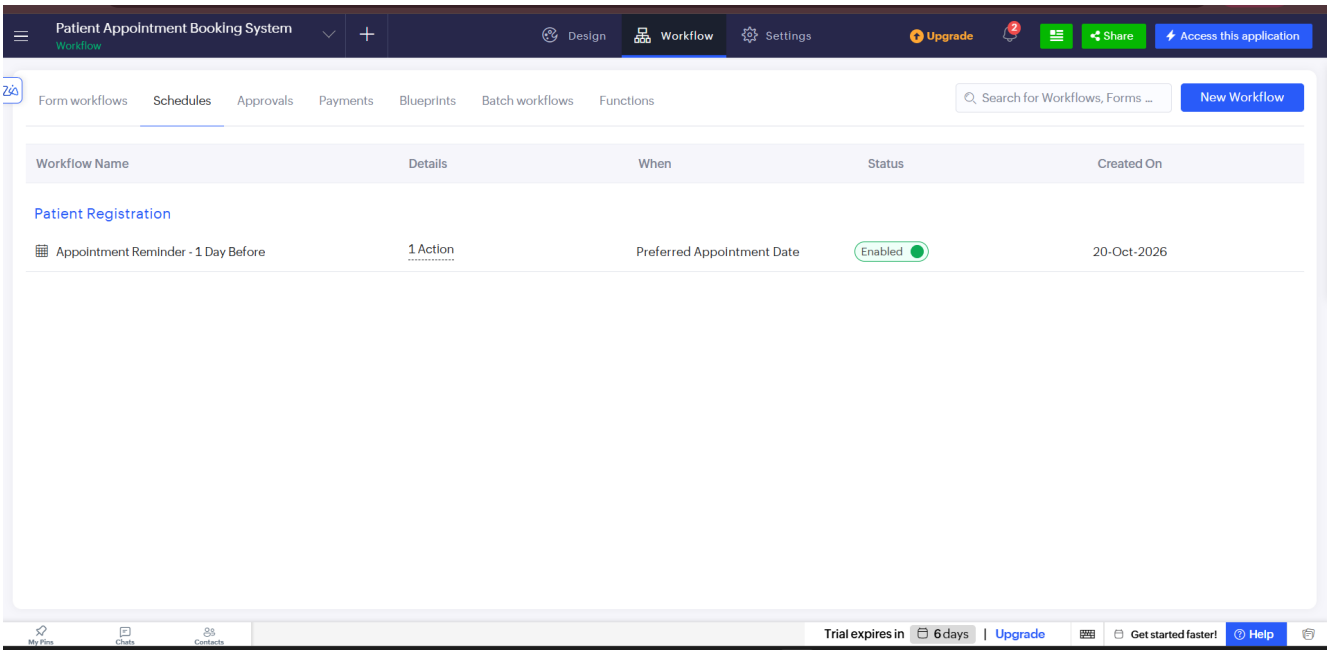

Figure 4. Schedule workflow: “Appointment Reminder - 1 Day Before” is enabled.

Result

Form validation was tested, an approval request was shown as pending review, a rejection email was received, and the appointment reminder schedule was shown as enabled. The screenshots demonstrate the configured workflow steps; they do not demonstrate that a future scheduled reminder email has already been delivered.
