EXPERIMENT 2

Setting Up a Zoho Creator Account and Exploring the Platform Architecture and Interface

Project: Patient Appointment Booking System

Aim

To create a Zoho Creator account and explore the platform architecture, features, and user interface for developing a low-code Patient Appointment Booking System.

Theory

Zoho Creator is a cloud-based low-code application development platform that enables users to build applications using visual interfaces, drag-and-drop components, forms, reports, workflows, and dashboards.

Component	Function in the Project
Applications	Containers that hold forms, reports, workflows, pages, and settings.
Forms	Collect and store patient, doctor, and appointment information.
Reports	Display and manage stored records in list, table, and calendar formats.
Pages	Provide customized interfaces that combine different application components.
Workflows	Automate tasks such as appointment confirmation and status updates.
Deluge Script	Implements advanced application logic and automation.
Users and Permissions	Control application access and user roles.

Procedure

1. Open the Zoho Creator website in a web browser.
2. Sign in using an existing Zoho account or create a new account.
3. Access the Zoho Creator dashboard.
4. Explore the option to create a new application.
5. Open the Application Builder and examine its navigation options.
6. Explore the Form Designer and identify text, number, date, and email fields.
7. Enter sample data into a form and observe how records are stored.
8. Explore the Report Builder and view submitted records.
9. Navigate to the Workflow section and examine automation options.
10. Explore Pages and the Page Builder.
11. Examine the application navigation menu.
12. Explore Settings, User Management, and Application Permissions.

13. Explore the Deluge Script environment.

14. Observe how forms, reports, pages, workflows, scripts, and permissions work together.

Screenshots / Practical Evidence

The following screenshots were captured while creating the Patient Appointment Booking System and exploring the Zoho Creator interface.

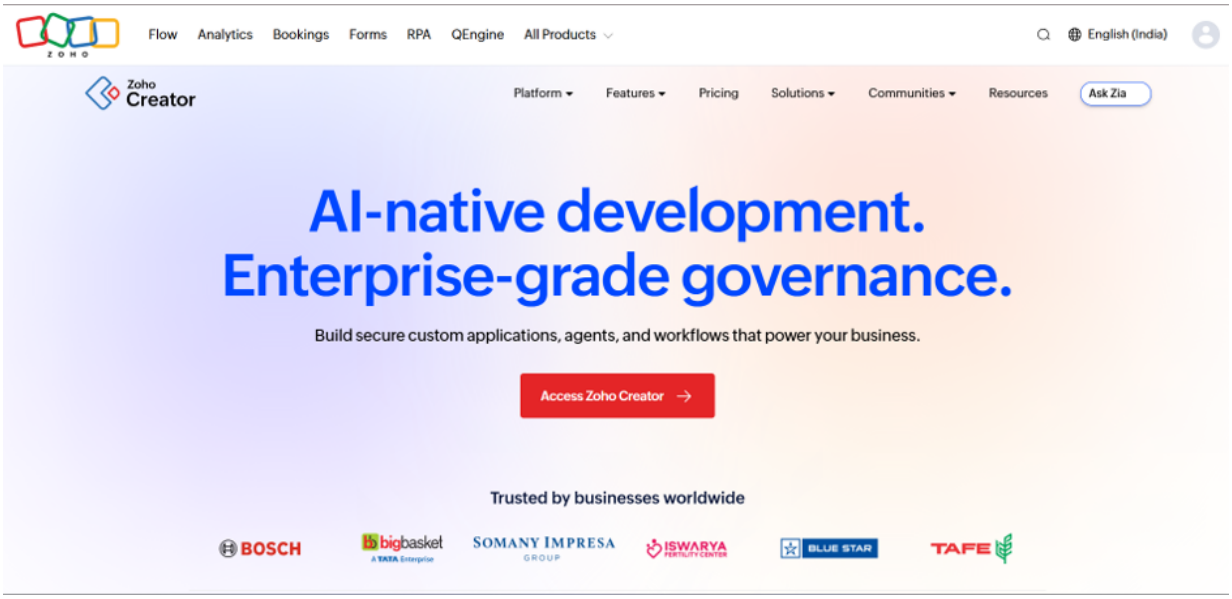

Figure 2.1: Zoho Creator Home Page

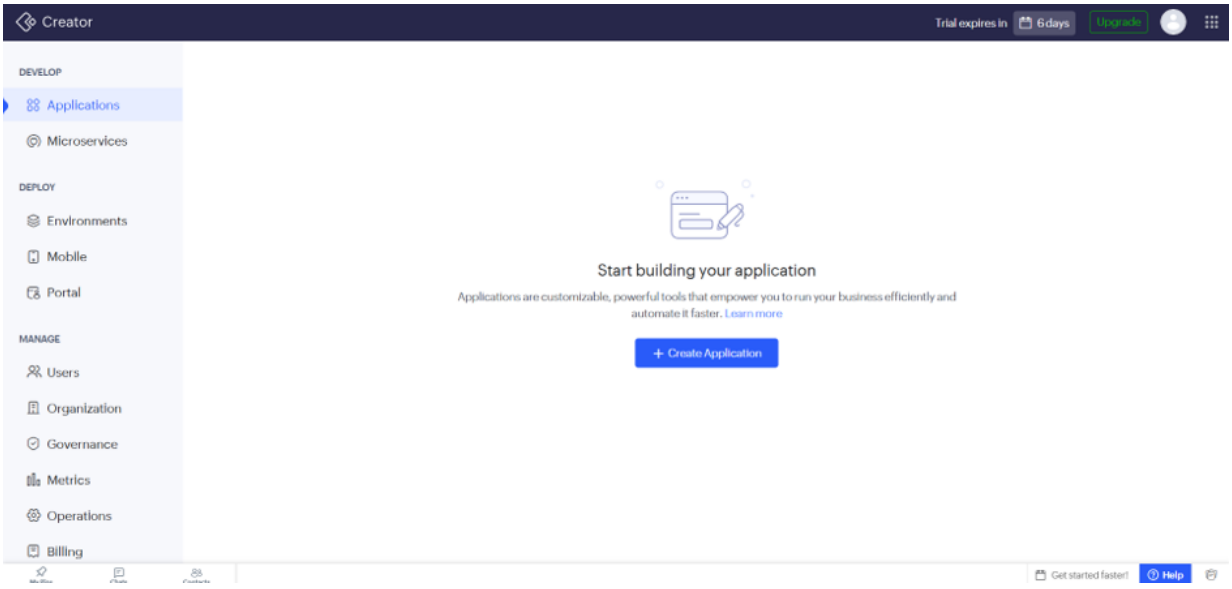

Figure 2.2: Zoho Creator Application Dashboard

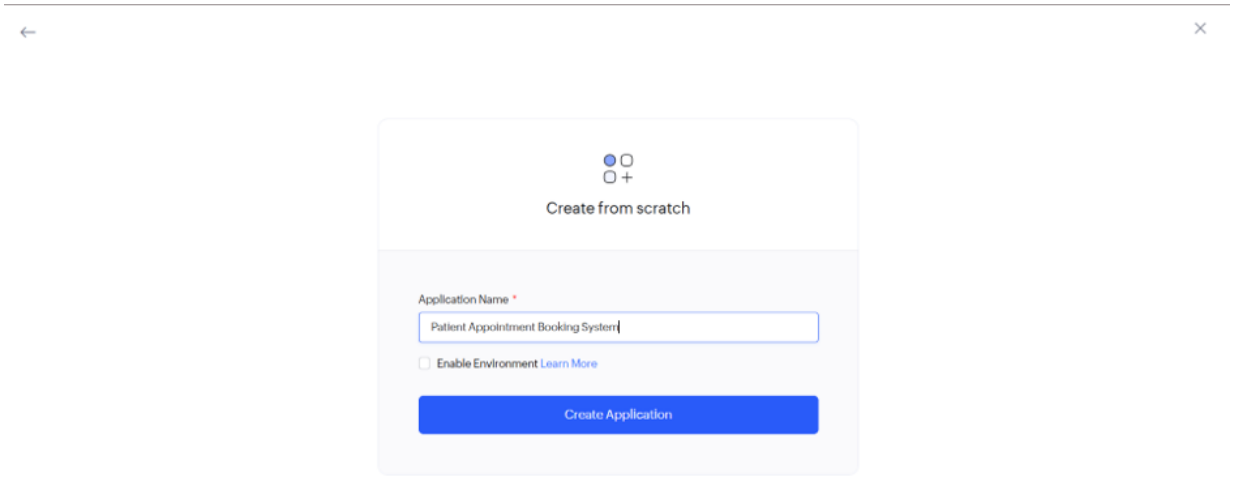

Figure 2.3: Create Application Interface

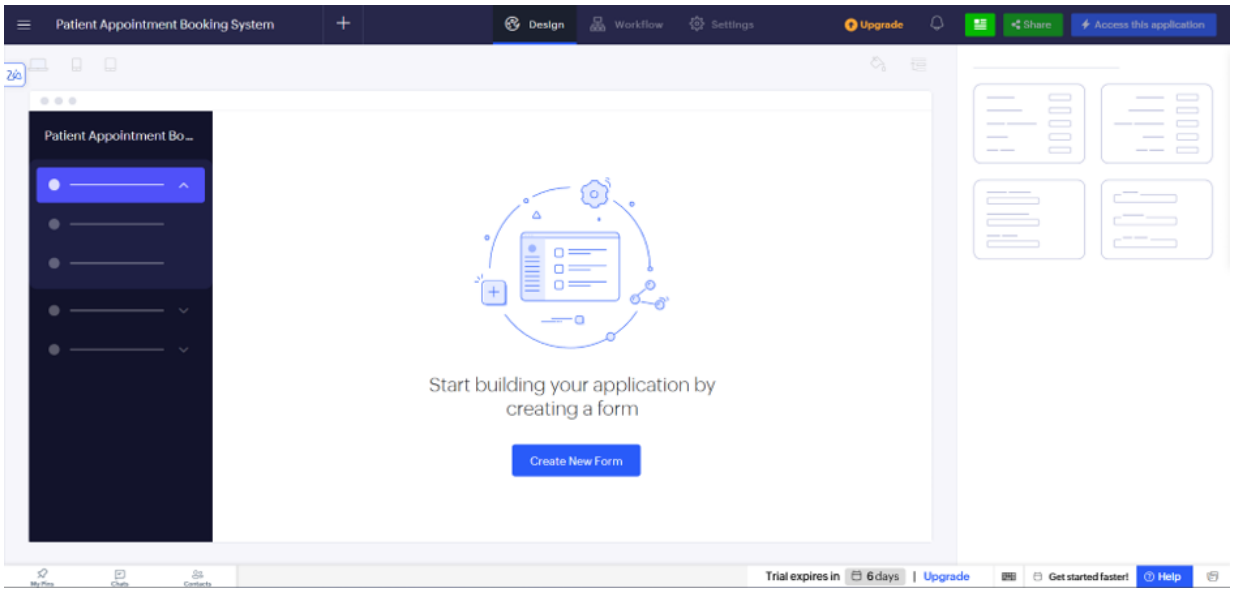

Figure 2.4: Patient Appointment Booking System Application Builder

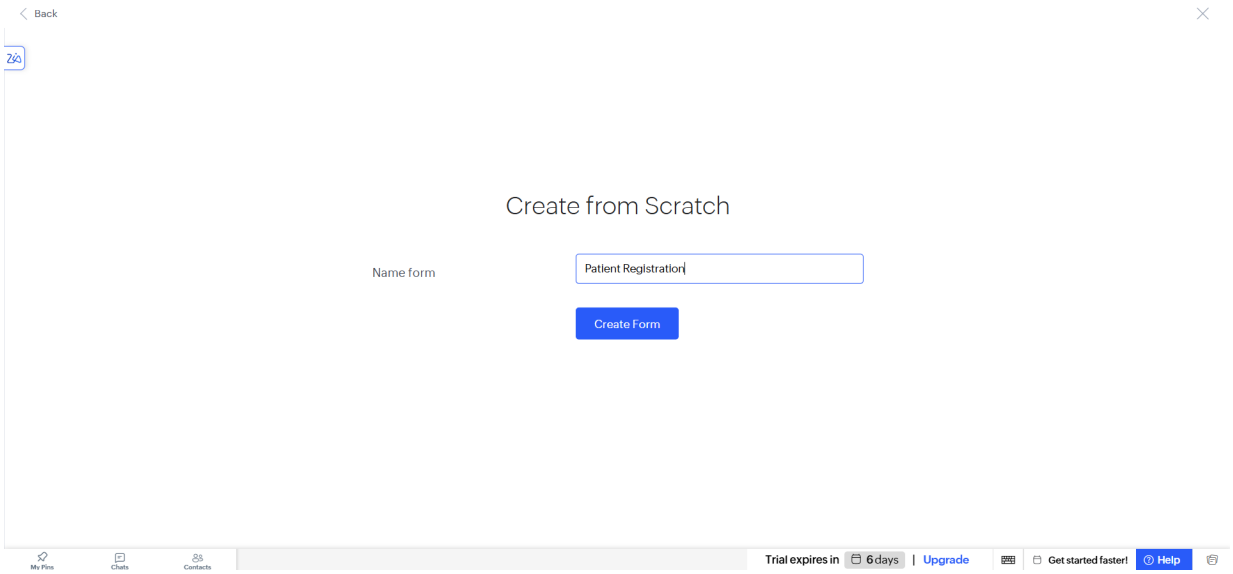

Figure 2.5: Create Patient Registration Form

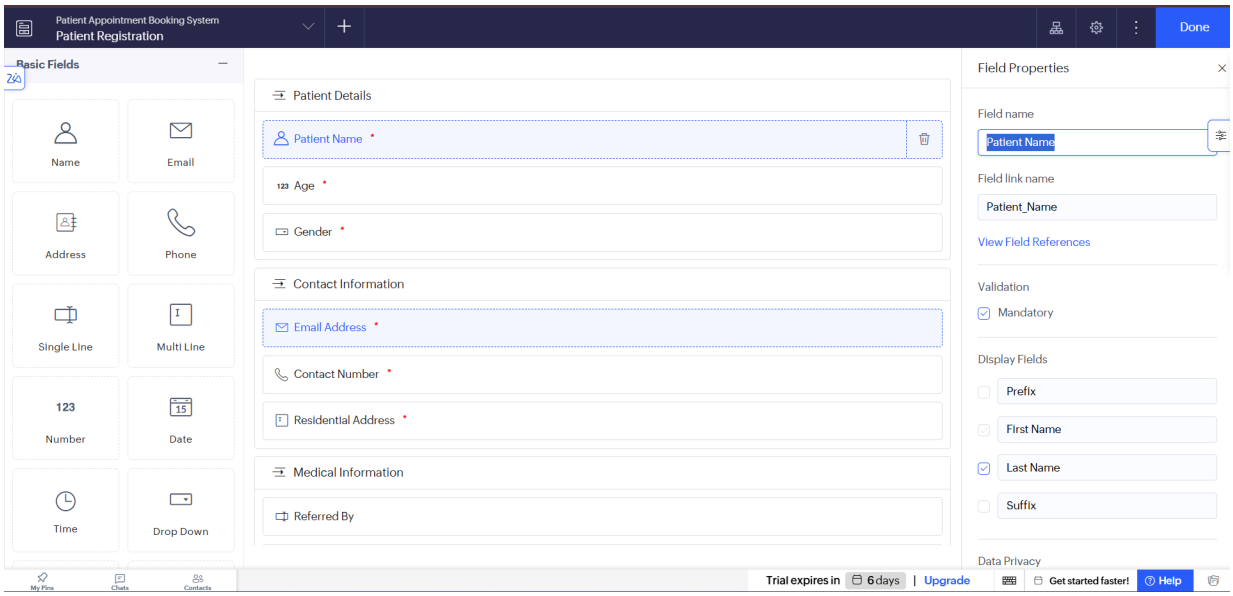

Figure 2.6: Patient Registration Form Designer

Result

The Zoho Creator platform architecture and user interface were explored. The application was created and the Patient Registration form designer was opened. The experiment demonstrated how forms and other platform components support the development of a low-code Patient Appointment Booking System. Report submission, workflow configuration, page building, and permission settings remain to be explored in subsequent practical steps.

Note: Only screenshots actually provided in this session are included. Additional screenshots can be added after the report, workflow, page, and permission sections are completed.
