LOW-CODE EXPERIMENT 4

Data Modelling and Form Design for a Business Application in Zoho Creator

Project: Patient Appointment Booking System

Name: Thanashree G R

Roll No.: 241501262

Department: AIML

Abstract

This experiment demonstrates data modelling and form design in Zoho Creator using a Patient Appointment Booking System. The Patient Registration form organizes patient, contact, medical and appointment information into four sections. It uses the 13 basic field types, applies mandatory-field validation, tests sample submission, and verifies saved records in a report.

1. Aim

To design a structured Patient Registration form in Zoho Creator using basic field types, group fields into sections, apply validations, test form submission, and view submitted records in a report.

2. Introduction

Zoho Creator is a low-code platform for building forms and reports. Each form field represents a data item stored with a submitted record. Grouping related fields into sections makes the form easier to complete, while suitable field types and mandatory settings improve data consistency. Reports provide a tabular view of saved records.

3. Form Design

The Patient Registration form is divided into four sections.

Section	Fields	Purpose
A. Patient Details	Patient Name; Age; Gender	Captures identity and demographic details.
B. Contact Information	Email Address; Contact Number; Residential Address	Stores contact and address details.
C. Medical Information	Referred By; Department; Existing Conditions; Preferred Service; Symptoms Description	Records referral, department, conditions, requested services and symptoms.
D. Appointment Scheduling	Preferred Appointment Date; Preferred Appointment Time; Appointment Type; Consent for Treatment	Captures scheduling preferences, visit type and consent.

Basic Field Types

Field type	Field used in the application
Name	Patient Name
Email	Email Address
Address	Residential Address
Phone	Contact Number
Single Line	Referred By
Multi Line	Existing Conditions; Symptoms Description
Number	Age
Date	Preferred Appointment Date
Time	Preferred Appointment Time
Drop Down	Gender; Department
Radio	Appointment Type
Multi Select	Preferred Service
Checkbox	Consent for Treatment

4. Procedure

Step 1 — Create the form: Opened the Patient Appointment Booking System in Zoho Creator, entered the Patient Registration form builder, and added fields from the Basic Fields panel. Related fields were grouped into four sections.

Step 2 — Configure field properties: Set appropriate field names and enabled Mandatory for required fields. Required fields are marked with a red asterisk in the form.

Step 3 — Preview and test: Opened the live form and entered sample patient details, contact information, medical information and appointment preferences.

Step 4 — Test validation: Tried to submit the form with Consent for Treatment unchecked. Zoho Creator blocked submission and displayed “Invalid entries found” with the message “This field is mandatory. Select at least one value.”

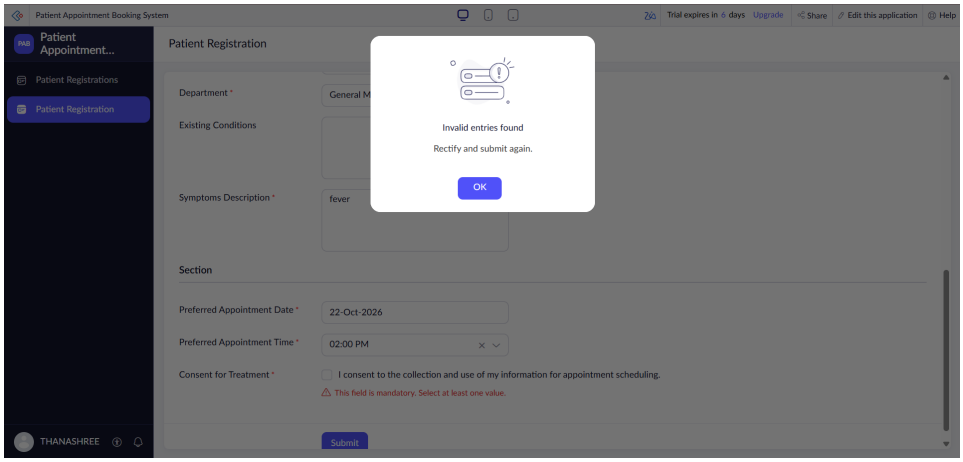

Figure 1. Validation message when the required consent checkbox is not selected.

Step 5 — Submit valid data: Selected Consent for Treatment and submitted the completed form. The application displayed “Patient Registration Added Successfully.”

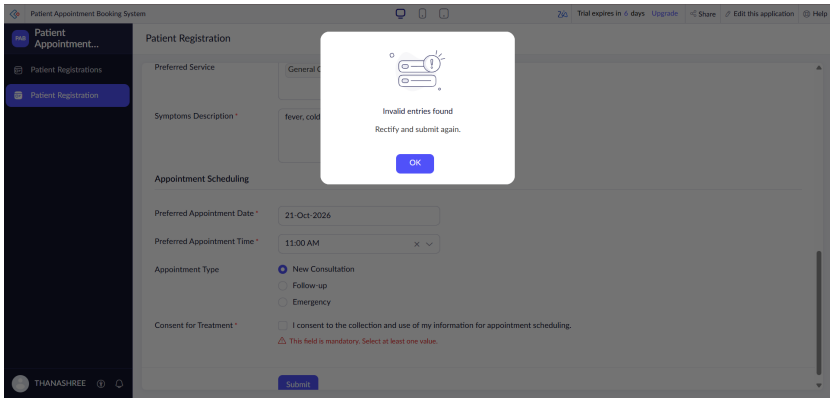

Figure 2. Successful submission of a patient registration.

Step 6 — Verify the report: Opened Patient Registrations and checked that the submitted record appeared in the report.

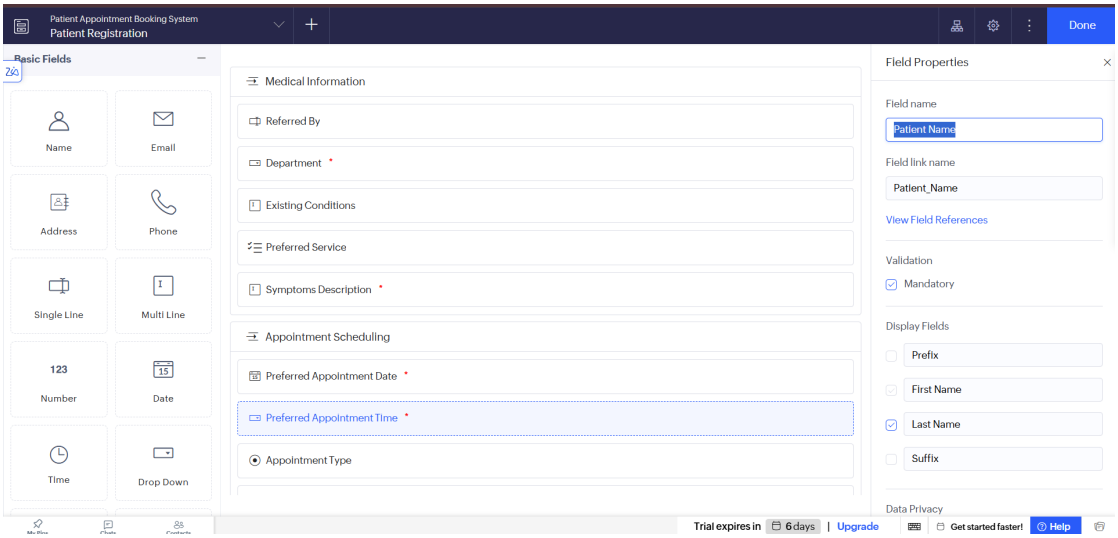

Figure 5. Medical Information and Appointment Scheduling fields.

6. Validations Applied

Field	Validation / behaviour
Required fields	Mandatory fields must be completed before the form can be submitted.
Consent for Treatment	Mandatory checkbox; submission is blocked unless selected.
Email Address	Email field type provides built-in email-format validation.
Contact Number	Phone field includes a country-code selector; India (+91) is shown in the live form.

7. Result

The Patient Registration form was created with four sections and fields corresponding to the 13 basic field types. Mandatory-field validation was demonstrated, sample data was submitted successfully, and the saved record was verified in the Patient Registrations report.

8. Conclusion

This experiment provided practical experience in data modelling and form design using Zoho Creator. It demonstrated how to select suitable field types, group related information, configure mandatory fields, test invalid and valid submissions, and review submitted data in a report.
